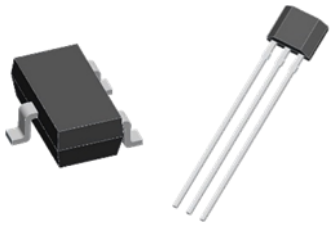
DATA SHEET

KTM1321

Unipolar North Pole Switching Sensor with CMOS output interface

KTM1321 is a magnetic switch sensor integrating tunneling magnetoresistance (TMR) technology and CMOS technology. With the characteristics of high precision, high speed, low power consumption and high sensitivity, it is suitable for magnetic field switch detection of industrial electronics and consumer electronics. The internal circuit of the chip includes a voltage generator, a comparator, a digital logic control module, a threshold trimming module and a CMOS output circuit. KTM1321 has wide working voltage range and wide working temperature range. This series of chips can provide a variety of magnetic field thresholds, switching operating frequencies and packaging forms to suit various applications.

KTM1321 is an N-pole magnetic field detection switch, which can provide N-pole magnetic response with extremely low current consumption. It detects the magnetic field parallel to the surface of the chip package. When the magnetic field strength is greater than the operating point (BOP N), the switch outputs a low level; when the magnetic field strength is lower than the release point (B RP N), the switch outputs a high level . . The chip can be operated in a supply voltage range from 1.8V to 5.5V and comes in standard SOT-23-3L and TO-92S packages.



Features

- Ultra low power consumption
- Wide operating voltage range
- Selectable Magnetic Field Threshold
- Magnetic Type: North pole
- CMOS output interface
- Operation temperature range from -40°C to +85°C
- Excellent ESD performance

Application

- Water meter, gas meter, flow meter
- non-contact detection
- Electronic lock, valve position detection
- Laptop and Tablet Switch Detection
- TWS headset, mobile phone

Absolute Maximum Ratings

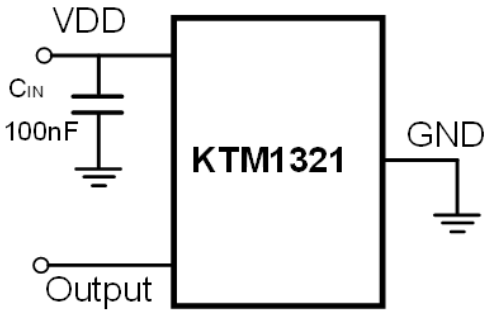
In accordance with the absolute maximum rating system (IEC60134).

Symbol	Parameter	Min.	Max.	Unit
V_{CC}	Supply voltage	-0.3	6.0	V
I_{Output}	Output drive current	-	5	mA
B	Withstand magnetic field <5 min	-	3000	G
$T_{junction}$	Maximum junction temperature	-	+150	°C
T_{stg}	Storage temperature	-50	+150	°C
$T_{working}$	Working temperature	-40	+85	°C
T_{reflow}	Reflow soldering temperature	-	260	°C
ESD_{HBM}	Human body model ESD	-	8000	V

Stresses beyond those listed under “Absolute maximum ratings” may cause permanent damage to the device.

This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

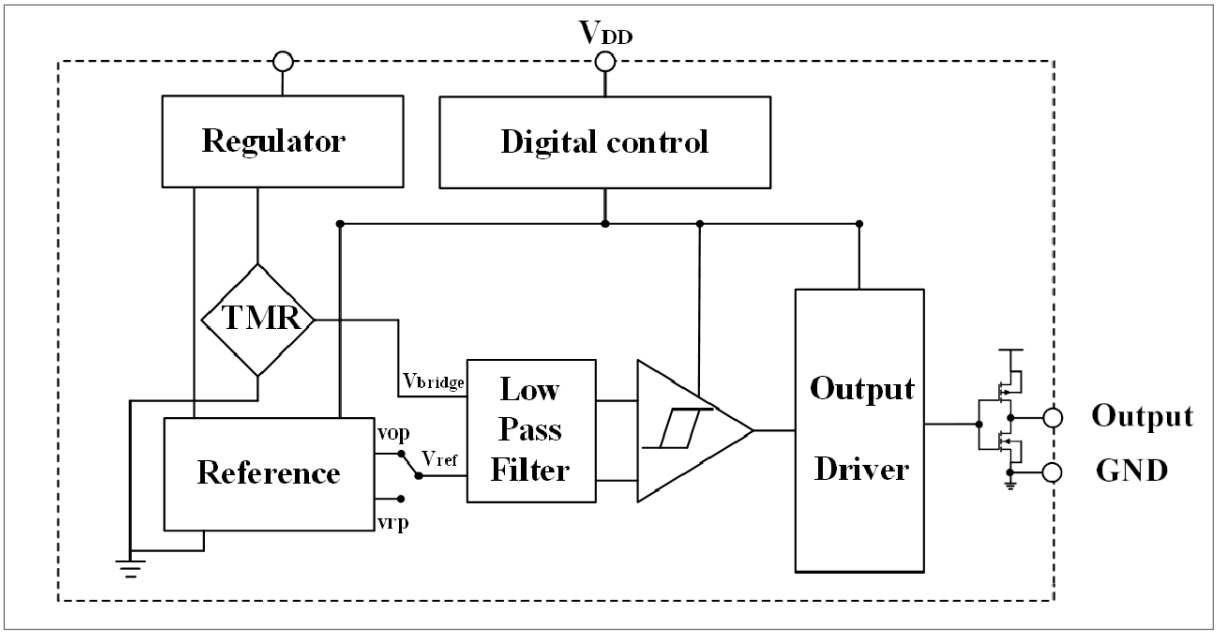
Application circuit schematic



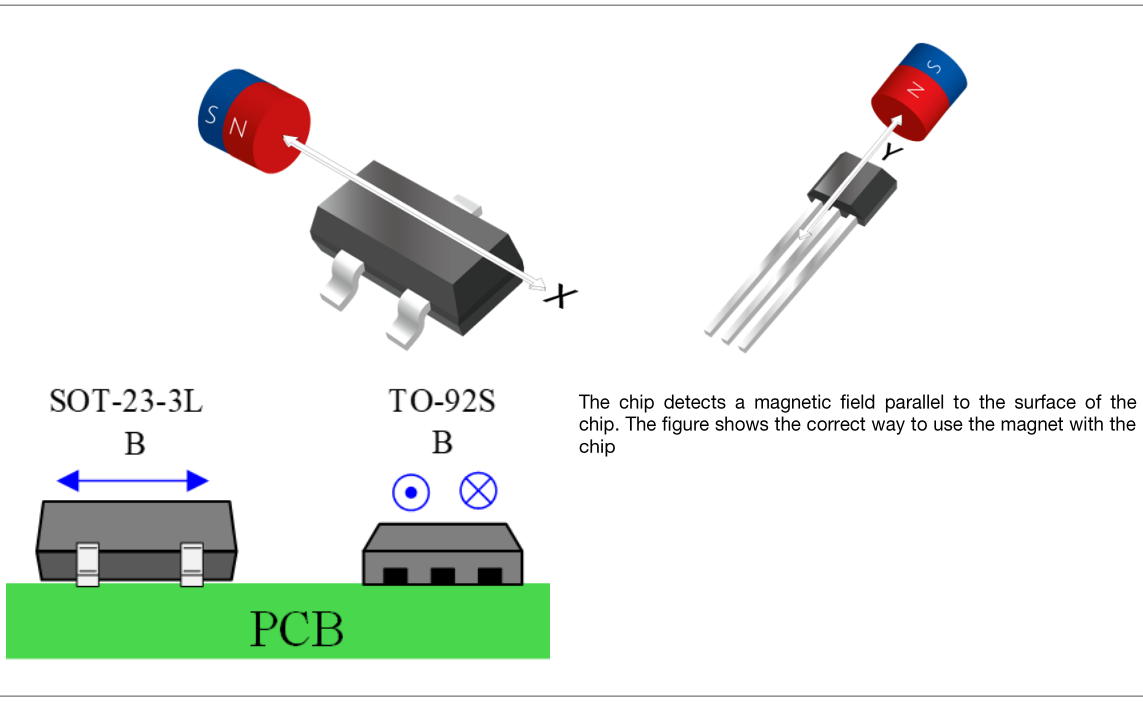
Note: In order to filter the noise at the power supply end of the chip, the use of a 100nF capacitor is recommended, which should be as close as possible to the VDD pin.

ESD

Functional block diagram

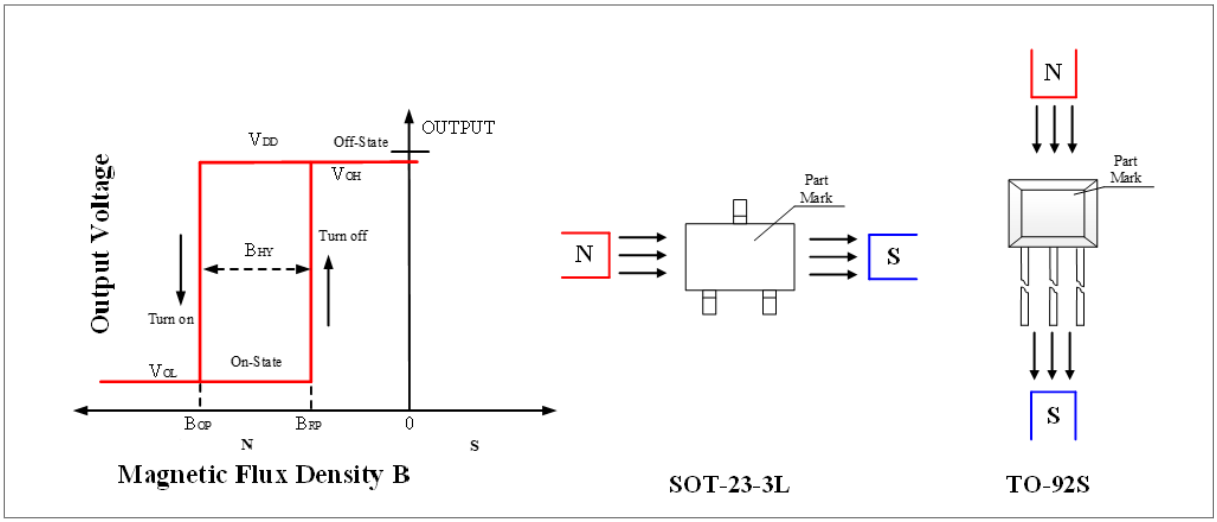


Switching output characteristics



The chip detects a magnetic field parallel to the surface of the chip. The figure shows the correct way to use the magnet with the chip

Output characteristics



Electrical Data

T_{amb} = +25°C, V_{DD} = 3.0 V; unless otherwise specified.

Symbol	Parameter	Conditions	min.	typ.	max.	Unit
V_{CC}	Supply voltage	Working status	1.8	5.0	5.5	V
V_{OL}	Output low level	I_{OUT} = 1mA	-	0.015	0.1	V
V_{OH}	Output high level	I_{OUT} = 1mA	V_{DD} - 0.1	V_{DD} - 0.005	-	V
$I_{DD,Avg}$	Average current [1]	TA=+25 °C , V_{DD} = 3.0 V	-	160.0	-	nA
$I_{DD,Awake}$	Awake state current [1]	TA=+25 °C , V_{DD} = 3.0 V	-	1.9	-	µA
$I_{DD,Sleep}$	Sleep state current [1]	TA=+25 °C , V_{DD} = 3.0 V	-	148.0	-	nA
T_{Awake}	Wake up time [1]	Working status	-	40.0	-	µs
T_{Period}	Cycle [1]	Working status	-	20.0	-	ms
$I_{DD,Avg}$	Average current [2]	TA=+25 °C , V_{DD} = 3.0 V	-	1.9	-	µA
F_S	Operating frequency [2]	Working status	-	5.0	-	kHz

[1] Only for low speed version.

[2] Only for continous working version.

Magnetic parameters

T_{amb} = +25°C, V_{CC} = 3.0 V; unless otherwise specified.

Symbol	Parameter	Conditions	Min.	Typ.	Max.	Unit
